

A Time for Science -- A Nature and Science Learning Center

Between October 22 and 24 the International Year of Astronomy 2009 Cornerstone Project, Galilean Nights, will see amateur and professional astronomers, enthusiasts, and the public taking to the streets all around the globe pointing their telescopes to the wonders that Italian astronomer Galileo observed 400 years ago.

Join us at *A Time for Science* Nature and Science Learning Center in association with Bray Hollow Nature Conservancy on Thursday, October 22 from 7pm to 10 pm (weather permitting) and add your numbers to those around the globe. Friday, October 23 will be our “cloud” date. There will be telescopes and binoculars trained at Jupiter, the moon and other objects in the evening sky. A Sky Show will also be presented.

This is also a TACO (Take a Child Outside) event so bring the kids.

Please preregister and find location and directions at our website
